SCLogic Premieres Facilities Workflow Platform at IFMA's World Workplace 2017 Conference & Expo

ANNAPOLIS, MD October 11, 2017 — SCLogic, a leading provider of campus logistics systems, announced they will be officially releasing their innovative workflow platform software at this year's IFMA World Workplace Conference & Expo in Houston, Texas, October 18-20, 2017.

Intra Enterprise™ provides organizations across industries with a centralized data platform where facilities managers can plan, execute, and measure the flow of assets, workplace requests, tasks, workspaces, files, mail, parcels, and people as they enter and move through their facility. The platform's powerful analytics capabilities transforms the captured data into any number of practical reports, helping facilities managers illustrate how they are improving not only their own department, but also supporting companywide initiatives such as increasing business service transparency, making better use of valuable resources, improving SLA standards, addressing demands for environmental sustainability, and bringing meaningful metrics to the enterprise stack.

The IFMA World Workplace Conference & Expo is the ideal venue to unveil this offering as they are well known for providing facility management professionals with the knowledge and programs necessary to run a top-notch facility. In keeping with this tradition, SCLogic is pleased to say that the introduction of Intra's facilities workflow platform will allow facility decision makers to:

- Streamline workflows
- Automate and manage workplace requests
- Create and display in-app analytics to measure utilization, SLA's, and performance
- Close the accountability gap with concrete data points
- Conform to compliance regulations with role-based access, permissions, and security
